

## COMPENG 2SH4 Project – Statement of Contribution

Your Group Name                      tripav2-ismailj

Your Name                              Viha Tripathi

Your Team Member's Name      Jumana Ismail

**You must complete this statement of contribution without discussing it with your project partner, i.e., individually. Your statement should be concise (at most one-and-a-half page). It has three parts:**

1. Tell us about your own contribution to the development of your COMPENG 2SH4 project. For example, you can tell us about which project iterations (as mentioned in the project manual) and C++ project classes that you worked on and completed. You can provide a concise answer either in paragraph form or through bullet points.

Me and my partner, Jumana split up this project evenly by splitting up the iteration parts for the first two parts and then splitting up the features for iteration 3. I completed iterations 1a, 2a, a part of feature 2, and feature 3. I also attempted the bonus but could not get it to work.

2. Repeat Part 1 above but this time tell us about your project partner's contribution to the development of your COMPENG 2SH4 project.

Jumana completed iteration 1b, 2b, feature 1 and a part of feature 2. She also attempted to do the bonus and provided feedback on my code.

3. Tell us about your experience in your first collaborated software development through this project – what was working and what wasn't. If you are a one-person team, tell us what you think may work better if you had a second collaborator working with you.

I liked being able to have someone to brainstorm and troubleshoot my code with rather than doing it alone. I thought it was a lot quicker and efficient. Although me and my partner split up our work, we were able to ask each other for help when we needed it which was very useful. One thing which was not working too well at first is figuring out how to work together on the code. As someone who isn't very familiar with GitHub and VS code, it was a bit of a learning curve figuring out the git commit, git pull and code merging situation. Other than that, it was a great experience partaking in a collaborative programming project.
