# COMPENG 2SH4 Project – Statement of Contribution

Your Group Name              tripav2-ismailj

Your Name                    Jumana Ismail

Your Team Member's Name      Viha Tripathi

**You must complete this statement of contribution without discussing it with your project partner, i.e., individually. Your statement should be concise (at most one-and-a-half page). It has three parts:**

1. Tell us about your own contribution to the development of your COMPENG 2SH4 project. For example, you can tell us about which project iterations (as mentioned in the project manual) and C++ project classes that you worked on and completed. You can provide a concise answer either in paragraph form or through bullet points.

I have worked on the following project iterations:

- Iteration 1B
- Iteration 2B
- Iteration 3 Feature 1, parts of Feature 2
- Attempted the bonus (but was not able to make it work)

2. Repeat Part 1 above but this time tell us about your project partner's contribution to the development of your COMPENG 2SH4 project.
   My partner did the following parts for the code development:
- Iteration 1A
- Iteration 2A (looked it over, adjusted the code, and ensured that it meet the expectations)
- Iteration 3 feature 3
- Attempted the bonus (but was not able to make it work)

3. Tell us about your experience in your first collaborated software development through this project – what was working and what wasn't.  If you are a one-person team, tell us what you think may work better if you had a second collaborator working with you.
   My experience about this first collaborated software development went very smoothly, this is because through this project my partner and I started the project on time, split the work evenly, and communicated effectively of when we want to merge our parts after finishing our assigned tasks individually to ensure that each iteration is running smoothly. All of this allowed for our code to work properly and as intended and we were able to resolve any problems any of us encountered all on time. Everything in this project went smoothly but the only thing that did not work was the bonus part. My partner and I agreed to attempt the bonus, thus, we both attempted it in our ends and shared any concerns in our code and the progress we got, however, both of us were not able to get the code for the bonus part working, so we both agreed to leave the bonus and submit the final project with all the iterations completed. All in all, it was a great and fun coding collaboration project, and we shared the workload evenly and effectively and we were able to finish the project on time.
